

Gulf of Mexico Harmful Algal Bloom Bulletin

Region: Texas

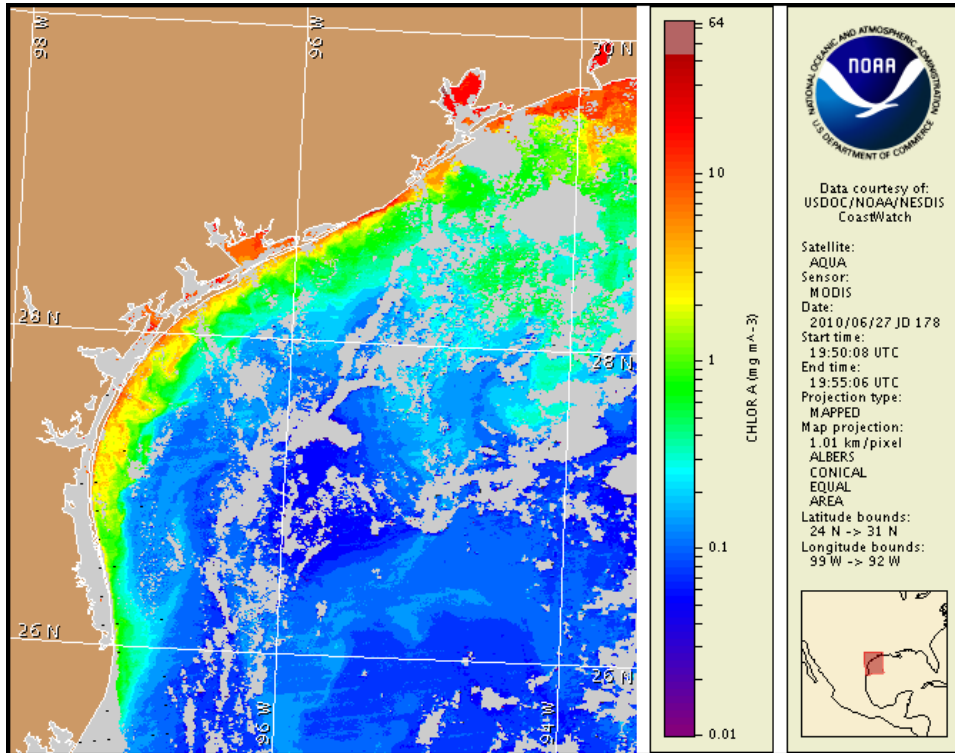

29 June 2010

NOAA Ocean Service

NOAA Satellites and Information Service

NOAA National Weather Service

Last bulletin: June 22, 2010

Satellite chlorophyll image with possible HAB areas shown by red polygon(s). Cell concentration sampling data from June 19 to 24 shown as red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). For a list of cell count data providers and a key to the cell concentration categories, please see the HABFS bulletin guide:

http://tidesandcurrents.noaa.gov/hab/habfs_bulletin_guide.pdf

Please note the following restrictions on all SeaWiFS imagery derived from CoastWatch.

1. Data are restricted to civil marine applications only; i.e. federal, state, and local government use/distribution is permitted.
2. Image products may be published in newspapers. Any other publishing arrangements must receive GeoEye approval via the CoastWatch Program.

Conditions Report

There are no reports of Texas red tide.

Analysis

There is no indication of a *K. brevis* bloom anywhere in Texas this week. -Lopez, Briggs

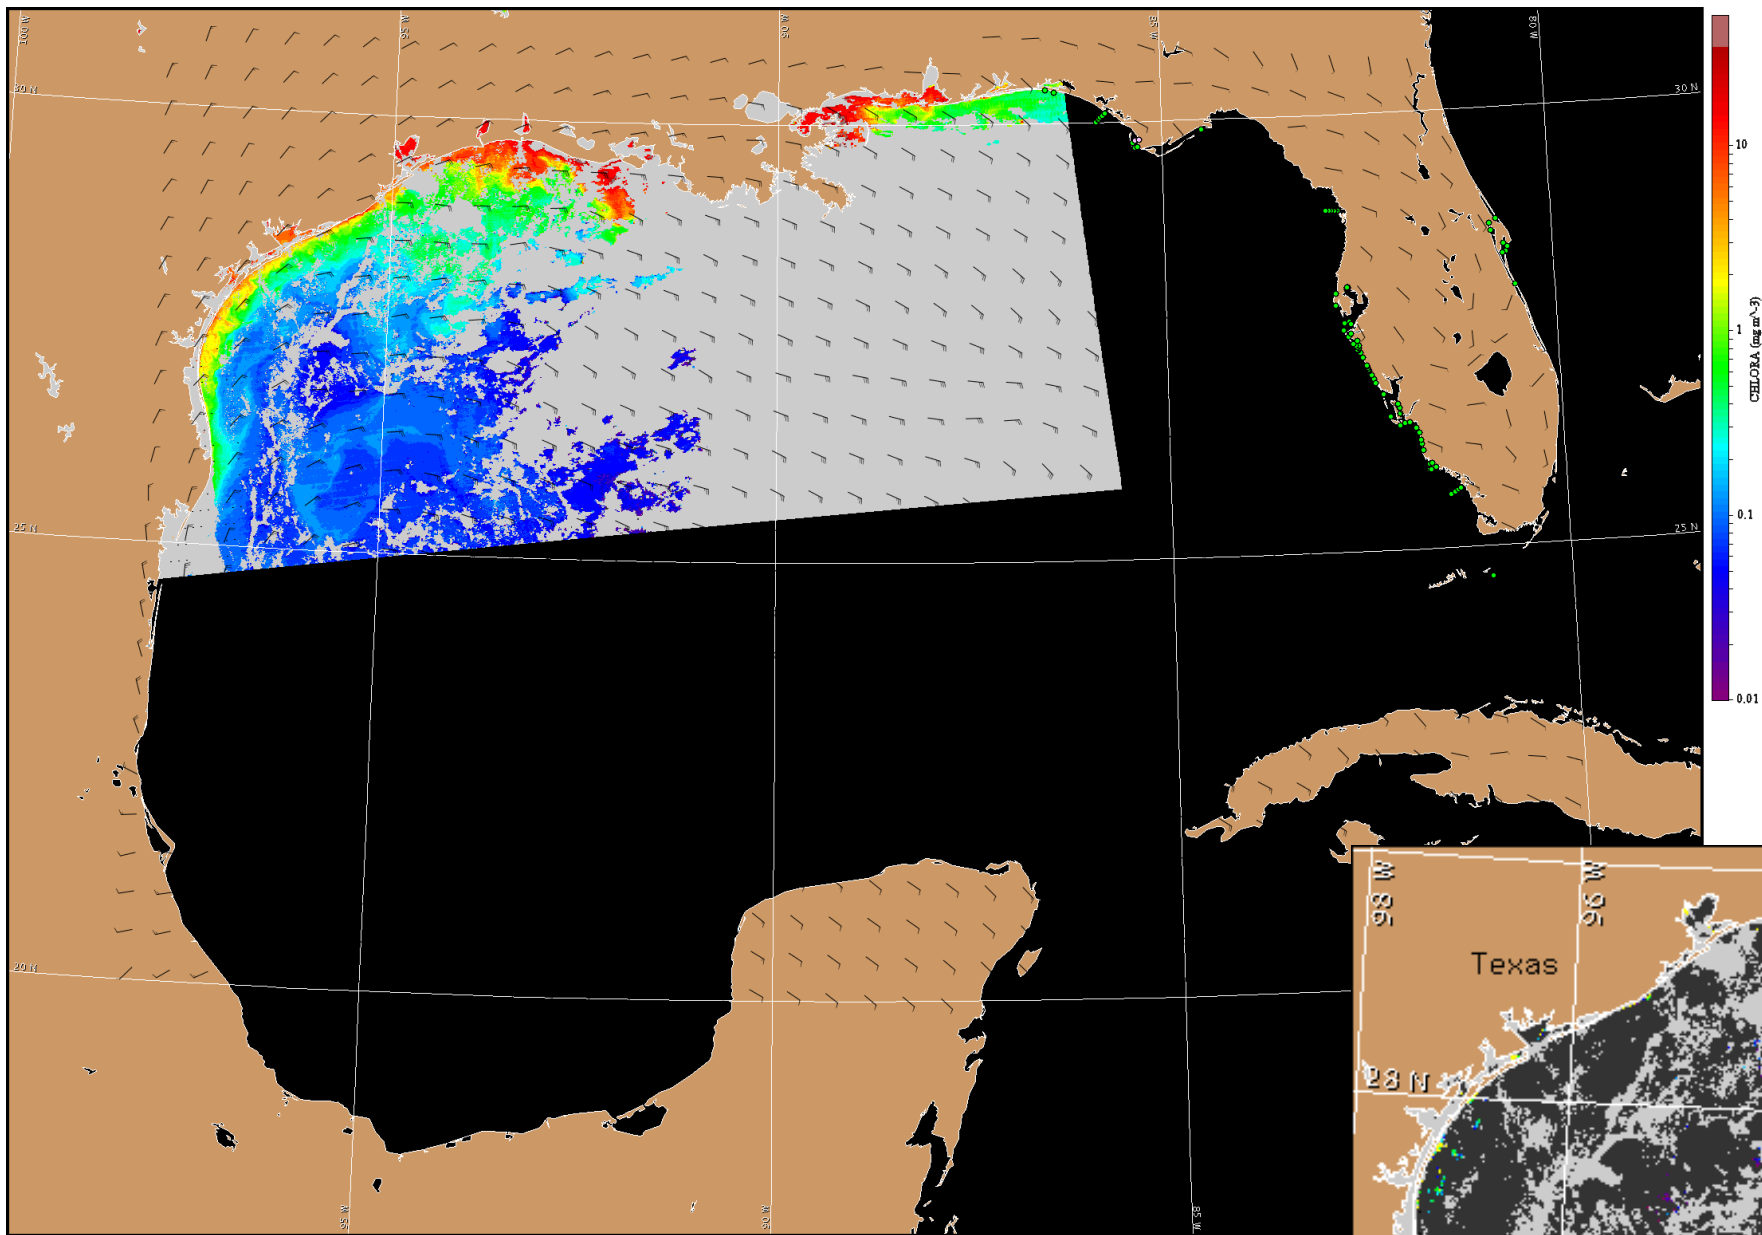

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the dotted vertical line are measured values; values to the right are forecasts. Wind observation and forecast data provided by NOAA's National Weather Service (NWS).

Wind Analysis

Today, northeast winds 15 to 20 knots, with tropical storm conditions developing Wednesday through Thursday. Tropical storm Alex is forecast to continue to strengthen into a category 1 hurricane today and is expected to make landfall just south of Brownsville, TX or northeast Mexico late Wednesday or early Thursday.
